

Picture of the three sizes of tanks these are for rainharvesting and irrigation a submersible pump can be placed inside the tanks and used as a pumping station for irrigation, with the filter attached to the downpipe for collection of rainwater.

Versatile they are suitable to be placed behind sheds and garages and each one has a 1inch outlet for linking tanks in combination. The 8 inch lid allows a multistage pump to be placed on the base inside. All tanks can be machined for electrical and plumbing fittings and our automatic mains top-up unit.
